

Axcient Fusion Overview

The world's first cloud-converged solution for IT resilience.

Fusion consolidates and converges your critical non-production workloads into a single cloud platform. With Fusion, you can eliminate redundant IT infrastructure, simplify and streamline your operations, and run your IT with the resilience and agility of the world's largest enterprises.

Business Continuity & Disaster Recovery

Go from catastrophic failure to full IT productivity in under 60 minutes.

Backup & Recovery

Achieve RPOs and RTOs of minutes with near-continuous replication.

Testing & Development

One-click, on-demand testing and development environments using real-time data.

Archiving & Compliance

Fully customizable retention policies for regulatory compliance.

Copy Data Management

Reduce data footprint by 30x with global data deduplication.

FEATURE	AXCIENT'S KEY ADVANTAGES
Cloud-Converged Platform	Critical non-production workloads consolidated into one cloud-converged platform.
Unmatched Recovery Times	Go from catastrophic infrastructure failure to full IT productivity in under 60 minutes.
Sandbox Testing	One-click, on-demand testing and development environments using current data.
Global Data Deduplication	30x reduction in data storage footprint with global data deduplication.
WAN Optimization	90% reduction in bandwidth consumption with in-line WAN optimization.
Near-Continuous Replication	Snapshots replicated to the cloud in as fast as 90 seconds.
Customizable Retention Policies	Achieve long-term retention requirements with one-, three- and seven- year retention options.
Data Security	Hardened transport and data security with AES-256 key-based encryption.
Increased Time to Value	Setup and deploy Fusion in under 10 minutes.

Goodbye, legacy infrastructure. Hello, Fusion.

The only solution you need to protect your primary data center

Fusion empowers you to achieve IT resilience and agility – without the bloat of additional on-premises infrastructure.

Full office virtualization in the cloud

Instantly recover individual applications, groups of applications, or your entire data center in the cloud. Rapidly spin up sandbox environments in the cloud for on-demand testing and development.

Fusion Features & Capabilities

Automated.

Built-in workflow automation spins up entire businesses in the cloud in under an hour.

Proactive.

Perform DR tests to ensure complete IT resilience in the event a failure.

Efficient.

Consolidate and converge multiple workloads and reduce storage footprint by up to 30x.

Optimized.

Replicate data quickly to the cloud and reduce bandwidth requirements by up to 10x.

Secure.

Encrypt data in flight and at rest with industry-leading AES 256 encryption.

Durable.

Achieve peace of mind with 99.99999999% data durability.

Flexible.

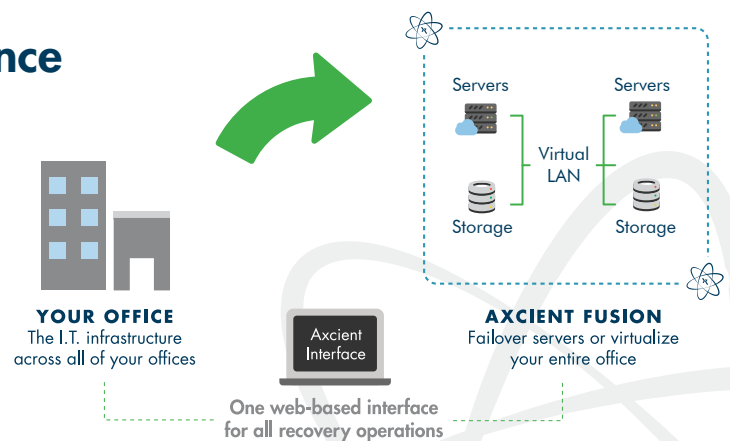

Scale workloads in the cloud, on-demand without limits.

On-Demand.

Leverage current data for on-demand testing and development in the cloud.

Fusion: Powerfully Simple IT Resilience

Fusion seamlessly optimizes, secures and replicates your data to the cloud. From a single copy of your data, you can spin up sandbox environments for testing and development, achieve long-term retention requirements and ensure your business remains resilient to software failures, natural disasters, or cyber threats.

About Axcient

Axcient solves complicated technology problems with powerfully simple cloud solutions to enable businesses to run at their full potential. Fusion, the world's first cloud-converged solution for IT resilience, empowers businesses of all sizes to operate with the resilience and agility of the world's largest enterprises while dramatically reducing data center footprint, complexity and cost. Thousands of businesses trust Axcient to keep their applications running, their data centers lean and employees productive. The company is headquartered in Mountain View, California. Follow @Axcient on Twitter for recent news and updates.
